

# SIMPLIFY. PRIORITIZE. OPTIMIZE.

AN ENTERPRISE CYBER RISK MANAGEMENT TOOL

“ As cyber professionals, we saw the need to evolve from just reacting to events and incidents to proactively managing enterprise cyber risk. We built MARS Suite to facilitate the rapid decision making required to prioritize and safeguard your critical assets.”

Jamie Miller, CEO  
Mission Innovate

Achieve mission success and gain operational efficiencies by simplifying your cyber risk management decisions

## SIMPLIFY

Data driven decision making with simplified risk scoring in an intuitive dashboard

- Provides a comprehensive view of your organization’s real-time cyber risk posture
- Uses letter grades to score your enterprise cybersecurity risk
- Simplifies task prioritization and saves time

## PRIORITIZE

Situational understanding with enterprise-wide actionable intelligence

- Delivers a clear picture of your infrastructure and critical assets
- Prioritizes your decisions and actions based on enterprise-wide situational understanding
- Allows you to move effortlessly from strategic to tactical to operational decision making

## OPTIMIZE

Improve your cyber posture and operational efficiencies with optimized resource allocation

- Seamlessly integrates with legacy solutions
- Scales dynamically to fit your needs
- Simplifies resource allocation
- Drives behavior change to focus on mission priorities
- Saves valuable time and resources

Focus your resources on what matters most to your mission success.

# SIMPLIFY. PRIORITIZE. OPTIMIZE.

AN ENTERPRISE CYBER RISK MANAGEMENT TOOL

“ MARS Suite does exactly what we need it to do. We’ve seen significant labor and time savings. MARS meets our requirements, from the analysts all the way up to the C-suite. We are much more effective at working on the data, managing vulnerabilities, and reporting status to leadership.”

CISO of a Major Government  
Propulsion Research Center

Achieve mission success and gain operational efficiencies by simplifying your cyber risk management decisions

## SIMPLIFY

Data driven decision making with simplified risk scoring in an intuitive dashboard

- Provides a comprehensive view of your organization’s real-time cyber risk posture in a dynamic dashboard powered by enterprise wide continuous monitoring
- Uses letter grades to score your enterprise cybersecurity risk with insights into every level of your organization with configurable risk and criticality profiles
- Simplifies task prioritization, saving time and allowing you to focus resources on eliminating vulnerabilities and threats to your most critical assets

## PRIORITIZE

Situational understanding with enterprise-wide actionable intelligence

- Delivers a clear picture of your infrastructure and critical assets, correlated with identified vulnerabilities, known threats, and incidents to safeguard your mission
- Prioritizes your decisions and actions based on enterprise-wide situational understanding, strengthening your cyber risk posture
- Allows you to move effortlessly from strategic to tactical to operational decision making with intuitive drill down capabilities
- Facilitates efficiencies with data management configured to your unique requirements
- Leverages your legacy solutions for situational awareness and to establish your mission specific cyber risk posture

## OPTIMIZE

Improve your cyber posture and operational efficiencies with optimized resource allocation

- Seamlessly integrates with legacy solutions, sensors, and disparate data sources
- Scales dynamically to fit your organizational needs and complexities
- Simplifies resource allocation tailored to the unique risk profiles for each organizational unit
- Incentivizes cybersecurity personnel’s attention and actions by rewarding behavior that minimizes organizational risk
- Monitors actions and achievement of mitigation milestones optimizing resource utilization
- Frees up valuable time and resources by automating relevant, configurable status, milestone completion, and compliance reports

INNOVATE

# SIMPLIFY. PRIORITIZE. OPTIMIZE.

AN ENTERPRISE CYBER RISK MANAGEMENT TOOL

Achieve mission success and gain operational efficiencies by simplifying your cyber risk management decisions

## SIMPLIFY

Data driven decision making with simplified risk scoring in intuitive dashboards

- Proprietary algorithms generate letter-grade risk scoring
- Uses SQL databases to organize and present data from disparate sensor feeds into the MARS Suite dashboards
- Integrated vulnerability remediation recommendations eliminate guesswork
- Backend tools combine internal and public domain network traffic, creating an enterprise-wide Common Operating Picture (COP)
- Seamless integration of full packet capture functionality, using Network-Based and Host-Based Intrusion Detection Systems (NIDS/HIDS) and robust analysis tools
- Database configuration capabilities consolidate information into customized organizational unit profiles
- Dynamic risk scoring factors in automatic tracking, logging, storing, presentation of exploit payloads, and system exfiltration activities

## PRIORITIZE

Situational understanding with enterprise-wide actionable intelligence

- Threat priority algorithms analyze data, based on asset criticality and vulnerability severity
- Enterprise-wide Common Operating Picture (COP) provides situational understanding to prioritize mitigation initiatives
- Drill down capabilities allow security teams to identify affected assets and prioritize urgent remediations
- Attribute-based Access Control (ABAC) functionality ensures users have access to the unique views they require

## OPTIMIZE

Improve your cyber posture and operational efficiencies with optimized resource allocation

- Automated analysis and reporting allows teams to shift from traditional manual reporting to focus on prioritized remediation activities
- Key cyber terrain mapping guides the allocation of resources to the most important areas
- Automated correlation of vulnerabilities to the remediations needed to secure affected assets streamlines the remediation process
- Game theory integration incentivizes practitioners to optimize workloads
- Aggregation and normalization of data from disparate IT sensor feeds shifts from point solutions to a uniform risk profile
- Configurable by integrating legacy solutions using software add-ons
