

MCGlobalTech Managed Security Awareness is a Security Awareness Solution that produces 3-4 minute-long animated episodes featuring real stories about real security breaches. These episodes are created and distributed every 30 days in order to educate employees about the dangers that exist in cybersecurity.

Under the mask

- MCGlobalTech Managed Security Awareness is made up of 3-4 minute long animated “episodes” that dive into a single security topic in order to teach your employees about the dangers of one particular cyber security threat.
- Each episode has been written by a Hollywood writer, and is based on an ACTUAL security breach that will likely be familiar to each of your employees.
- A new episode is released every 30 days so your employees will never see the same episode twice, so security awareness is constantly reinforced.
- Each episode is “gamified” so your employees will earn points for consuming the content quickly, and answering the quiz correctly in the least amount of tries.
