When's the last time you had a penetration test? When's the last time you had someone analyze your security the way an attacker would?

This FREE mini-penatration test will show you:

- If a payload can cross your firewall
- If your users have easily crackable passwords, allowing hackers to quickly infiltrate key systems
- If rogue software is installed on your endpoints
- Verified your Antivirus solution is working AS YOU EXPECT IT TO
- If your system is exposed to abuses in AD and if there are unanticipated issues with AD account permissions
- If unencrypted PII is on your network

In other words:
THE VERY STUFF YOU WANT TO KNOW SO YOU KNOW WHAT TO FIX AND CHANGE

InTech SOLUTIONS

A $987 VALUE!

But FREE to YOUR clients!

Is this right for my Client?
Are they security-conscious?
Do they see technology as necessary for growth?
Is a systematic way of protecting their business important to them?
Can they follow simple directions?
YES? Then offer massive value with a mini-pentest!
