SOPIX2

The result of years of research into the specific needs of veterinary dentistry, SOPIX2 introduces the integration of patented Ace technology with a fiber optic-based CMOS chip.

Ace technology makes it possible to control the amount of X-rays accumulated by the sensor, ensuring that all images are optimal and never overexposed. These advances now make it possible to see pathology such as tooth resorption detail and offer the ability to see through the zygomatic arch. Bone trabeculation and lamina dura are clearly visible.

High-tech, clear, convenient, functional, and smart!

GENORAY ZEN-PX2 PORTABLE DENTAL X-RAY SYSTEM

- » Excellent image quality.
- » Light performance Tube and HFG makes sharp and clear images.
- » Advanced Radiation Shielding ensures less than 0.13% of allowed doses leak.
- » Ideal output for film & digital sensor: 60kV, 2mA.
- » Easy to use.
- » Sensor sold separately.
